Read the passage carefully and answer Questions 1 to 5: The Asian Elephant is the largest land mammal on the Asian continent. They inhabit dry to wet forest and grassland habitats in 13 range countries across South and Southeast Asia. Asian elephants are extremely intelligent and social animals. They live in matriarchal herds consisting of related females and their young offspring, led by the oldest and most experienced female known as the matriarch. Elephants play a crucial role in maintaining the biodiversity of ecosystems. As megaherbivores, they consume large quantities of vegetation and disperse seeds across vast distances through their dung. They also dig waterholes in dry riverbeds, which provide essential water for many other forest creatures during severe droughts. However, Asian elephants face severe threats, primarily due to habitat loss, fragmentation, and human-elephant conflict caused by expanding agricultural lands.
